B2- Sample 6 mark questions

In these questions you will be assessed on using good English, organising information clearly and using specialist terms where appropriate.

1. Enzymes play an important role in digestion. Using examples of digestive enzymes, describe the structure and function of enzymes.

2. To ensure crops can be grown year-round, in the UK many are grown in greenhouses. Greenhouses allow farmers to carefully control the environment in which the plants are grown to maximise the rate of growth. State and explain the factors which can limit the rate of photosynthesis.

3. Essential body processes such as movement and growth require energy. Energy is released during both aerobic and anaerobic respiration. Describe the differences between these two types of respiration.

4. Mitosis and meiosis are types of cell division. Describe the differences between these two types of cell division.
