

The Engineering “ENERGISER” event with The Smallpeice Trust

June 30th 2015

Last week 60 of our year 10 Design and Technology students were involved in the Smallpeice Trust's (not a spelling mistake!) Energiser Event. The event was focussed on informing our students about how engineering can play an important role in the development of renewable energies such as wind and solar power.

The students took part in various practical activities including creating some really impressive wind turbines to harness the power of the wind and building (and racing!) their own solar powered cars.
